GENERAL DESCRIPTION

DESCRIPTION

LTI460HN07 is a color active matrix liquid crystal display (LCD) that uses amorphous silicon TFT(Thin Film Transistor) as switching components. This model is composed of a TFT LCD panel, a driver circuit and a backlight unit. The resolution of a 46" is 1920 x 1080 and this model can display up to 16.7M colors with wide viewing angle of 89° or higher in all directions. This panel is intended to support applications to provide a excellent performance for Flat Panel Display such as Home-alone Multimedia TFT-LCD TV, Display terminals for AV application products, and Digital Information Display (DID).

FEATURES

- RoHS compliance (Pb-free)
- High contrast ratio, High luminance
- SPVA(Super Patterned Vertical Align) mode
- Wide viewing angle ($\pm 178^\circ$)
- 1920 x 1080 pixels) resolution (16:9)
- Low power consumption
- Direct LED Backlight
- DE(Data Enable) mode
- LVDS (Low Voltage Differential Signaling) interface
- Super Narrow Bezel
- Landscape / Portrait type compatible

APPLICATIONS

DID(Digital Information Display)

If the intent to use this product is for other purpose, please contact Samsung Display.

(2) Temperature and relative humidity range are shown in the figure below.

- 90 % RH Max. (Ta ≤ 39 °C)
- Relative Humidity is 90% or less. (Ta > 39 °C)
- No condensation

(3) Module Vibration and shock tests are not guaranteed due to SNB model's characteristics

1.2 ELECTRICAL ABSOLUTE RATINGS

Item	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage	V _{DD}	10.8	13.2	V	(1)

Note (1) Within Ta (25 ± 2 °C)

(2) The permanent damage or defect to the device may occur if the panel is operated at the figure set, which exceeds a limit of maximum value stated in the former spec. The functional operation should be limited to the conditions described above under normal operating conditions.

(2) BACK LIGHT UNIT

2. Application Information for DID(Digital Information Display)

A DID's screen may display the sudden image such as an image retention.

To extend the lifetime and optimize a function of module, the below-mentioned operating conditions are required.

1. Normal operating condition

- a. Temperature: $20 \pm 15^{\circ}\text{C}$
 - b. Humidity: $55 \pm 20\%$
 - c. Display pattern: Moving image or image, which switches regularly
- Note) The sudden image on the screen can be displayed after the static image is shown in the long-term.

2. The operating conditions when the module is operated under the abnormal condition.

- a. Ambient condition
 - It is recommended to set the DID up in the well-ventilated place.
- b. The function of power off and screen saver
 - The function of periodical power-off or a screen saver is needed when the static image is displayed in the long-term.

3. Operating conditions to prevent the sudden display resulted from displaying the static image in the long-term.

- a. The proper operating time: Under 20 hours a day.
- b. The moving image shall be inserted between the static displays periodically.
 - The refresh time for liquid crystal is needed.
- c. The periodic changing of background color and character's color(image)
 - Use the different color for background and character (image) respectively.
 - Change colors periodically.
- d. Avoid combining the color for background with the color for character, which has a largely different luminance.

Note (1) Abnormal condition means all operating condition except normal operating condition.

Note (2) The moving image or black pattern is strongly recommended as a screen saver.

4. Only the lifetime of DID stated in this spec is guaranteed if the DID is used under the proper operating conditions.

3. OPTICAL CHARACTERISTICS

The following items are measured under the stable conditions.* The optical characteristics should be measured in the dark room or the equivalent environment by the methods shown in the Note (5).

Measuring equipment : TOPCON RD-80S, TOPCON SR-3, ELDIM EZ-Contrast

$T_a = 25 \pm 2 \text{ }^{\circ}\text{C}$, $V_{\text{LCD,VCC}} = 3.3\text{V}$, $f_v = 60\text{Hz}$, $f_{\text{DCLK}} = 148.5\text{MHz}$, $\text{IF} = 100\%$ duty

Note (1) Test Equipment Setup

The measurement should be executed in a stable, windless and dark room between 40min and 60min after lighting the backlight at the given temperature for stabilization of the backlight. This should be measured in the center of screen.

Environment condition : $T_a = 25 \pm 2^\circ\text{C}$

Photo detector	Field
SR-3	1°

Note (2) Definition of test

Note (3) Definition of Contrast Ratio (C/R)

: Ratio of gray max (G_{\max}) & gray min (G_{\min}) at the center point ⑤ of the panel

$$C/R = \frac{G_{\max}}{G_{\min}}$$

G_{\max} : Luminance with all pixels white

G_{\min} : Luminance with all pixels black

Note (4) Definition of 9 points brightness uniformity

$$B_{uni} = 100 * \frac{(B_{\max} - B_{\min})}{B_{\max}}$$

B_{\max} : Maximum brightness

B_{\min} : Minimum brightness

Note (5) Definition of Response time : Average response time of all Gray to gray

Note (6) Definition of Luminance of White : Luminance of white at center point ⑤

Note (7) Definition of Color Chromaticity (CIE 1931)

Color coordinate of Red, Green, Blue & White at center point ⑤

Note (8) Definition of Viewing Angle

: Viewing angle range ($C/R \geq 10$)

Note)

(1) Test Point: TTL controls signal and CLK at LVDS Tx at the input terminal of system.

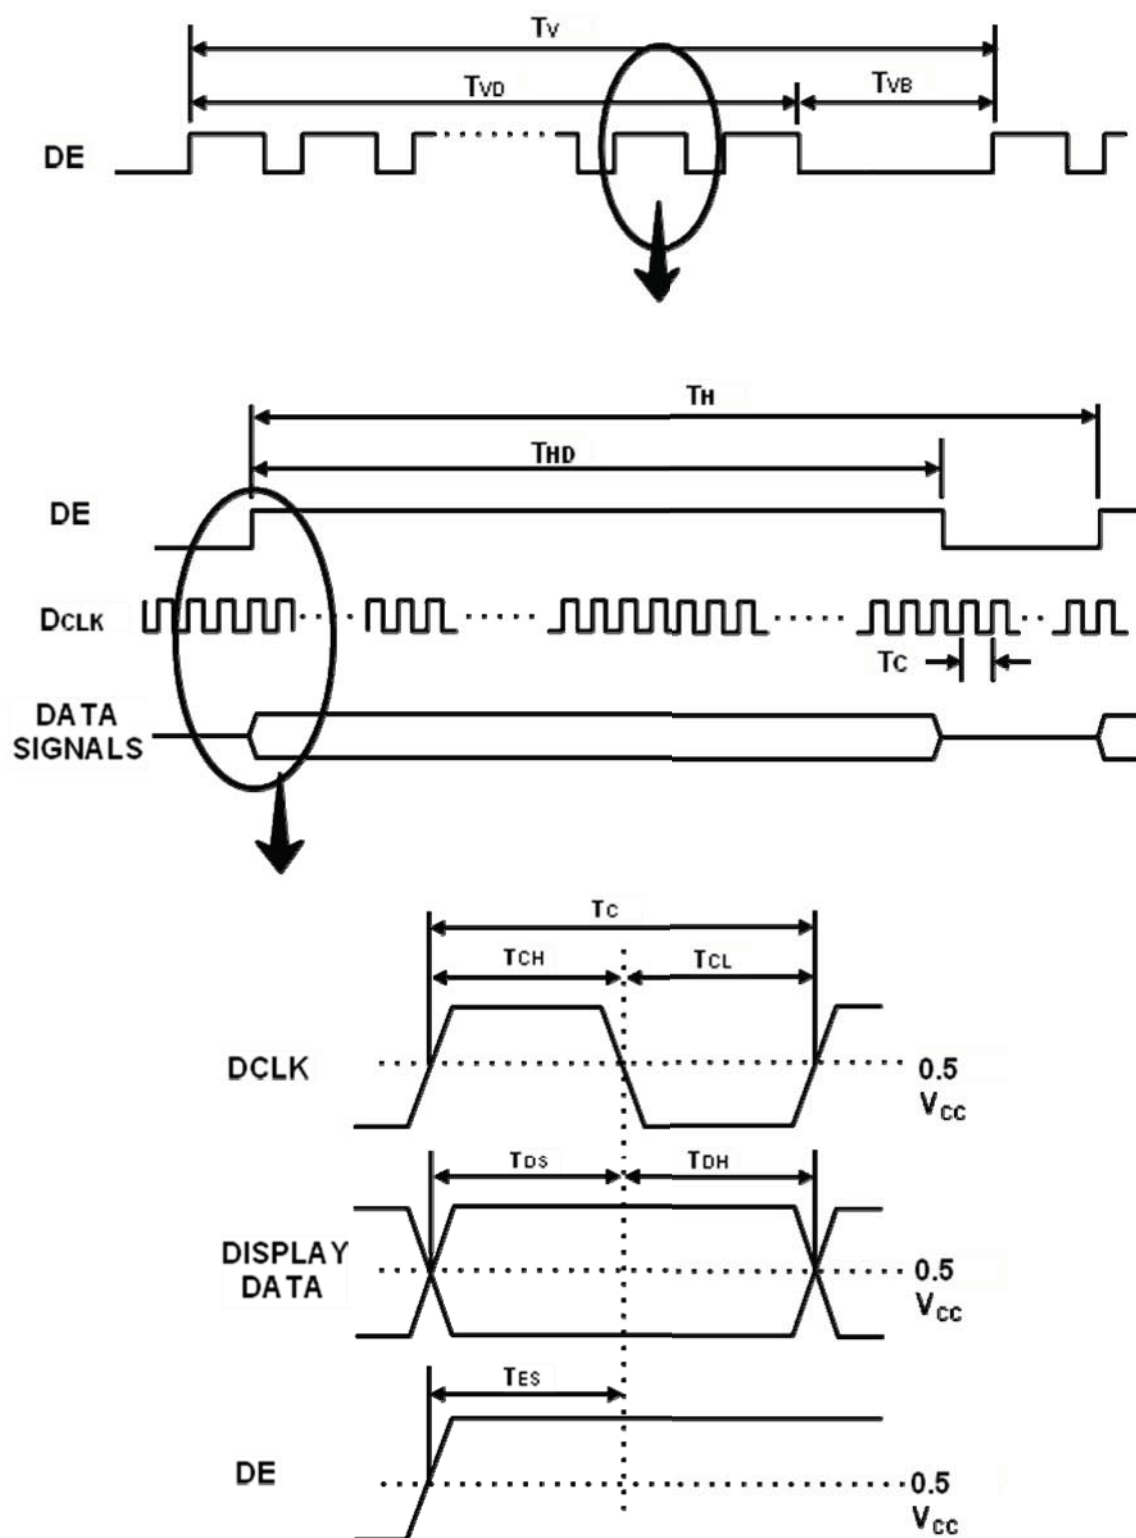

(2) Internal VDD = 3.3V

(3) The spread spectrum

- The limit of spread spectrum's range of SET in which the LCD module is assembled should be within $\pm 3\%$

- Frequency for modulation : Min 30KHz ~ Max 300KHz

6.2 TIMING DIAGRAMS OF INTERFACE SIGNAL (ONLY DE MODE)

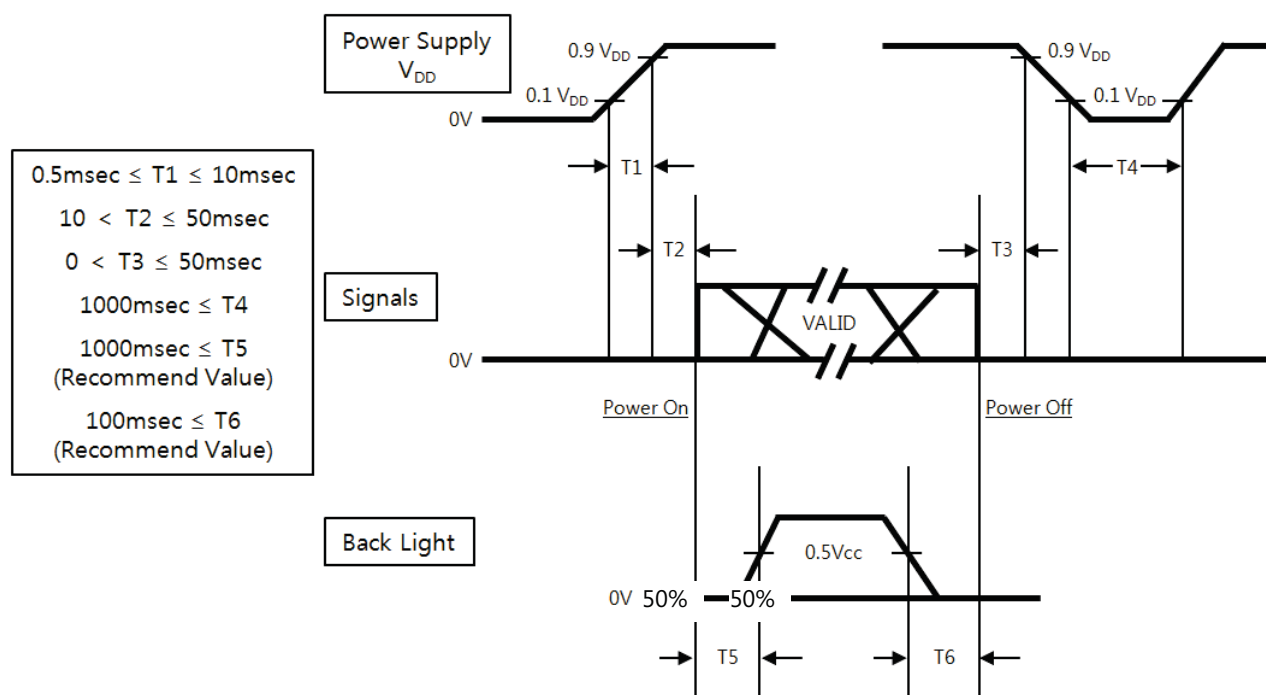

6.3 CHARACTERISTICS OF LVDS INPUT DATA

TBD

6.4 THE SEQUENCE OF POWER ON AND OFF

To prevent the product from being latched up or the DC in the LCD module from starting an operation, the order to turn the power on and off should be changed to the order as shown in the diagram below.

$T1$: V_{DD} rising time from 10% to 90%

$T2$: The time from V_{DD} to valid data at power ON.

$T3$: The time from valid data off to V_{DD} off at power Off.

$T4$: V_{DD} off time for Windows restart

$T5$: The time from valid data to B/L enable at power ON.

$T6$: The time from valid data off to B/L disable at power Off.

- The supply voltage of the external system for the Module input should be the same as the definition of V_{DD} .
- Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily show abnormal screen.
- In case of V_{DD} = off level, please keep the level of input signals low or keep a high impedance.
- $T4$ should be measured after the Module has been fully discharged between power off and on period.
- Interface signal should not be kept at high impedance when the power is on.

8.2 Packing Specification

Item	Specification	Remark
LCD Packing	8ea / (Packing-Pallet Box)	1. 14Kg(Typ weight) / LCD (36ea) 2. 8.0 Kg / Cushion-pallet (4ea) 3. 10.5 Kg / Packing-Pallet Box (1ea) 4. Cushion-pallet Material : EPS 5. Packing-Pallet Box Material : DW4
Pallet	1Box / Pallet	1. Pallet weight = 8kg => Pallet Material : WOOD
Packing Direction	Vertical	
Total Pallet Size	H x V x height	1250mm(H) x 1130mm(V) x 690mm(height)
Total Pallet Weight	146.5kg	Pallet(8kg) + Module(14kg*8ea=112kg) + Cushion(8kg*2ea = 16kg) + Pallet-BOX(10.5kg)

9. MARKING

A nameplate bearing followed by is affixed to a shipped product at the specified location on each product.

(1) Parts number : LTI460HN07

(2) Revision code : 3 letters

(3) Lot number : X X X X XXX XX X F01

1. After service part

Lamps cannot be replaced because of the narrow bezel structure.

10. GENERAL PRECAUTIONS

10.1 HANDLING

- (a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.
- (b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- (c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- (d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (f) The desirable cleaners are water, IPA (Isoprophyl Alcohol) or Hexane. Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth .In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (h) Protect the module from static , it may cause damage to the C-MOS Gate Array IC.
- (i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (j) Do not disassemble the module.
- (k) Do not pull or fold the LED FPC.
- (l) Do not touch any component which is located on the back side.
- (m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (n) Pins of I/F connector shall not be touched directly with bare hands.

10.2 STORAGE

We highly recommend to comply with the criteria in the table below.

ITEM	Unit	Min.	Max.
Storage Temperature	(°C)	5	40
Storage Humidity	(%rH)	35	75
Storage Life	12 months		
Storage Condition	<ul style="list-style-type: none">- The storage room should be equipped with a good ventilation facility, which has a temperature controlling system.- Products should be placed on the pallet, which is away from the wall not on the floor.- Prevent products from being exposed to the direct sunlight, moisture, and water. Be cautious not to pile the products up.- Avoid storing products in the environment, which other hazardous material is placed.- If products are delivered or kept in the storage facility more than 3 months, we recommend you to leave products under the condition including a 20°C temperature and a humidity of 50% for 24 hours.- If you store semi-manufactured products for more than 3 months, bake the products under the condition including the 50°C temp. and the 10% humidity for 24hrs after being used.		

10.3 OPERATION

- (a) Do not connect or disconnect the cable to/ from the module at the "Power On" condition.
- (b) The power shall be always turned on/off by the item 6.5. "Power on/off sequence"
- (c) The module has a circuit with a high frequency. The system manufacturers shall suppress the electromagnetic interference sufficiently. The methods to ground and shield are important to minimize the interference.
- (d) Design the length of cable to connect between the connector for back-light and the inverter as short as possible and the shorter cable shall be connected directly.
The longer cable between that of back-light and that of inverter may cause the luminance of lamp(CCFL) to lower and need a higher startup voltage(Vs).

10.4 OPERATION CONDITION GUIDE

- (a) The LCD product should be operated under normal conditions.
Normal condition is defined as below;
 - Temperature : 20±15°C
 - Humidity : 55±20%
 - Display pattern : continually changing pattern (Not stationary)
- (b) If the product will be used in extreme conditions such as high temperature, humidity, display patterns or operation time etc., It is strongly recommended to contact SDC for Application engineering advice.
Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at Airports, Transit Stations, Banks, Stock market, and Controlling systems.

10.5 OTHERS

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Module should be turned clockwise (regular front view perspective) when used in portrait mode.
- (c) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (d) Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.
- (e) If the Module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen. To avoid image sticking, it is recommended to use a screen saver.
- (f) This Module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.
- (g) Please contact SDC in advance when you display the same pattern for a long time.
